Policy on Pediatric Tonsillectomy for Obstructive Sleep Apnea

Note: This Policy will supersede Milliman Guideline ACG: A-0145

Upon review of the literature and consultation with Otolaryngology Providers, it has been determined that the Milliman Care Guidelines for Tonsillectomies for obstructive sleep apnea (OSA) are not applicable for children under the age of 12.

Clinical Indications for Procedure:

1) **Ages 3-12:**

   Signs and symptoms consistent with obstructive sleep apnea, including all of the following- AND clinical correlation by an otolaryngologist confirming the need for tonsillectomy:
   - Daytime sleepiness or hyperactivity
   - Noisy mouth breathing while awake
   - Sleep disordered breathing

   **NOTE:** criteria does not include requirement of polysomnography

2) **Age less than 3:**

   Polysomnography findings confirm apnea-hypopnea index greater than 1.

3) **All ages** with Suspected Obstructive Sleep Apnea with co-morbidities such as obesity, Down Syndrome, craniofacial abnormalities, neuromuscular disorders, sickle cell disease, or mucopolysaccaridoses:

   Polysomnography findings confirm apnea-hypopnea index greater than 1.

   **NOTE:** Tonsillectomies will be authorized as outpatient procedures, with the exceptions of #2 and #3. In these cases overnight monitoring will be authorized if, during polysomnography, the apnea-hypopnea index is 10 or more, or the oxygen saturation nadir is less than 80%.
